OUR COMMITMENT TO YOU

DeWeyl Tool Co, Inc. manufactures the finest quality bonding wedges for the microelectronic industry. These wedges are designed for the placing and bonding of fine aluminum and gold wires during the assembly of integrated circuits. Our product is used throughout the semiconductor, microwave, disk drive and hybrid electronic industries. We have been offering quality products and services since 1969. DeWeyl has always placed high priority on satisfying the customer's requirements. In fact, it is this dedication to customer satisfaction that allows us to stand apart from our competitors. DeWeyl offers application specific bonding wedges for both gold and aluminum wire. Our products are specifically designed for both thermo-compression and thermo-sonic wedge bonding applications. We also offer low or no heat bonding tool solutions. DeWeyl specializes in wedge technology and as a result we offer extensive product variation. Our product may be found worldwide in some of the most demanding applications. DeWeyl supports an extremely specialized field and takes great pride in offering very specialized solutions.

DeWeyl applies 30 years of manufacturing experience to insure customer satisfaction. Extensive efforts are made to insure our promise to you. Throughout the manufacturing process, a total of eighteen independent inspections are performed using laser digital micrometers, optical comparators at 250x magnification, optical inspection stations at 500x magnification and the latest in digital camera technology. Our last and final inspection is cosmetic to insure that the product placed in the shipping container is in perfect condition. The tool is encapsulated immediately following the final inspection and then no further handling happens to the tool. Our manufacturing results are constantly analyzed and evaluated to maintain the highest quality product. Bonding tools are our primary focus and customer satisfaction is our main goal.

Our commitment is to meet and exceed your application requirements.

TOOL SELECTION

TOOL SELECTION

For every wire size there is a series of tools available from DeWeyl with different bond lengths (BL). Unless the bond pad is the limiting factor, bond lengths of 2½ to 3 times wire diameter are recommended. The longer the bond length, the less critical the bond schedule.

BOND LENGTH & FOOT WIDTH

The correct bond length for a given job should be as large as the pad and adjacent obstacles will allow. The foot width is restrained by the distance between bonds, yet must be large enough to accommodate some degree of off-center wire flow as well as maximize the bonding area.

FRONT RADIUS AND BACK RADIUS

The **front radius** effects the rate of transition from the round wire to the flattened area of the bond. In general more gradual transition yields stronger and more consistent bonds, yet larger front radii either decrease the bond length or increase the tip size.

The **back radius** affects the “heel” of the bond. As the back radius is increased the heel is strengthened. The stronger heel aggravates the tail-pulling problem where the wire is broken too far away from the heel. Incorrect termination of the second bond leaves too much tail on the pad and not enough wire under the tool's foot to successfully begin the next bonding sequence. Some back radius is recommended, however, since a back radius of zero produces a “heel-crack” and an unreliable bond.

HOLE SIZE

Most bonding wedges include a wire feed hole designed to lead the wire directly under the bonding foot. The diameter of the hole is normally about 250% of the wire diameter (applies to small wire .00025 to .0015 only). In most cases this ratio is limiting enough to insure proper wire centering, yet large enough to prevent excessive drag. As the width of the bond foot is decreased, however, a smaller hole (200% of wire diameter) may become necessary to satisfy the more critical wire centering problem.

WIRE FEED ANGLE

The wire feed angle is varied to accommodate obstacles near the pad which might foul the wire during the bonding operation. Larger wire feed angles increase the length of the hole and increase the drag potential. Two things are done to offset this effect. First, the entry of the hole is countersunk thus dramatically increasing the hole diameter through most of its length and incidentally creating a better target for manual threading. Second, the back edge of the shank near the tip is tapered or machined out. The latter solution implies a modification of the tool's vibration characteristics discussed below. 30°, 45°, and 60° wire feed tools are available. 60° wedges are particularly applicable within high walled ceramic packages where pads are inaccessible to standard 30° and 45° wedges.

TIP-TO-SHANK RATIOS

Ultrasonic bonding wedges vibrate at ultrasonic frequencies effectively translating mechanical energy from the transducer and the transducer horn to the bonding environment. The amplitude of the tool's vibration at its foot is a ratio of the input (shank) diameter to the output (foot) diameter. Therefore, bonding wedges are designed with varying tip-to-shank dimensional ratios.

A diminished tip dimension as in the case of the DeWeyl 60° Hi-Gain wedge vibrates at a high amplitude which rapidly dampens in contact with the bond surface.

A standard 30° wedge with the same input amplitude, will vibrate at a comparatively lower amplitude but dampens more slowly, presenting the hazard of over-working a delicate bond. In general, larger wire requires more energy to bond than small. Hence stiffer wedges work best as wire size increases.

The Wire Feed Hole

The Wire Feed Hole Is Important

The feed hole on the bonding wedge is likely the most critical aspect of the wedge configuration. The feed hole has the responsibility of guiding the wire accurately to the center of the bond foot. The feed hole's most significant contribution is how it defines the looping performance for our customers.

Looping Performance

What do we mean by looping performance? Our customers use our product to attach wires between two points. This wire needs to have an arc shape in order to prevent shorting on other circuitry within the electronic device. If a wire is laid flat, it would sag down and touch other electrical points in the customer's product. If the wire is shaped into an arc similar to the shape of a bridge spanning a stream, then the wire is stronger, just like the bridge is stronger. This wire shape is what we call the loop profile. The loop profile can be very low or it can be very high for a variety of different reasons. The loop profile will be dictated by the length of the wire, the diameter of the wire and the height difference between the first and second bond. Our customers have to consider all these factors when deciding which wedge to utilize.

Feed Hole Diameter

There is a very simple guideline to start with when selecting the diameter of the feed hole. Generally speaking, the feed hole diameter will be twice the diameter of the bonding wire. A .001" diameter wire will use a .002" diameter hole. Customers deviate from this general guideline for a variety of reasons.

Feed Hole Problems

The feed hole plays such a critical role that it can also be the cause of many performance problems. These problems can be very difficult for our customers to resolve quickly because the symptoms can be caused from several different sources. These problems include poor wire feeding, poor looping, wire damage, poor wire termination and difficulty threading the wire. This is why accuracy on the feed hole diameter, the feed hole length, and the funnel depth are extremely critical.

Feed Hole Wirelock

The feed hole gains control over the wire by producing "wire lock." Wire lock is when the wire cannot slide through the feed hole. The wire is thus "locked" inside the feed hole. Wire lock takes place when the angle of the wire moves significantly away from the angle of the feed hole. In other words, the wire angle and the hole angle need to be at the same angle in order for the wire to freely pass through the feed hole. If the angles of the wire and hole are not the same, then there will be friction on the wire. The greater the angle differential the greater the friction. Eventually the friction is high enough to achieve wire lock. Then the tool is in control of the wire and in control of the loop profile. A couple of feed hole aspects can cause significant wire lock problems. The two primary aspects would be the hole diameter in relationship to the wire diameter, as well as the feed hole length.

Feed Hole Length

One of the other factors that contributes to wire lock performance is the length of the feed hole. The length of the feed hole is altered when the depth of the funnel is altered or if the "T" dimension of the tool is modified.

Wedge Tip Styles

Manual Wedge

Automatic Wedge

The DeWeyl product catalog offers a significant variety of tools. The general difference between "Automatic" bonding wedges and "Manual" bonding wedges hinges on the difference between "notch" and "box" style wedges.

The Notch Style Wedge

We make several variations of the notch style tool. The notch style wedge is designed for use on manual wire bonders. The notch style wedge can be modified with more aggression than the box style.

For example, we can offer a narrower "W" dimension on a notch style because the walls of the box are missing from a notch style tool. Our "CS" series is the best choice for manual wire bonders and is especially useful for our microwave technology customers.

Why is the notch style a poor choice for automatic wire bonding equipment? If you look closely at the sketch of the notch tool you will see how the wire is free to move side to side once it exits the feed through hole. It is this characteristic that prevents the notch tool from being selected for automatic bonding applications. When a manual bonding operator looks through the microscope to place the wire bond he/she will target the wire to the bond pad. Thus, if the wire shifts side to side it does not pose any significant problem with regards to placement accuracy.

However, automatic wire bonders cannot see when the wire shifts from side to side. The auto bonder can only assume knowledge of the center of the wedge and thus attempt to place that wedge center on the center of the bonding pad. Thus, excellent wire centering is needed when operating an automatic wire bonder.

Notch style wedges: AS, CS, KS, CSH, KSH, R, RCS, RCSH

The Box Style Wedge

This tool is best suited for automatic and semi-automatic wire bond equipment. Thanks to the tool design, the wire is contained from side to side movement until just before the bond foot area. This wire control helps keep the wire centered on the tool and offers enhancements to placement accuracy.

We offer many styles of boxed tools. Two examples would be the "CL" series and the other is the "CN" series. The "CL" series offers a bit more looping freedom than the "CN" style. Look closely at the "CN" catalog page and you will notice how the exit of the "CN" style is more restrictive than the "CL" style tool. This restriction can generate more drag on the wire during looping when compared to the "CL" series. Depending on the application, this extra wire drag will either be helpful or problematic.

Box style wedges: AL, AN, CL, CN, KN, KNL, CLH, CNH, KNH, KNLH, RKNH, RNH,

Please contact the DeWeyl factory for application specific recommendations.

Parameters

Ultrasonic bonding wedges are designed to carry high frequency mechanical vibrations together with the wire to discrete positions on a pad where pressure and ultrasonic "scrubbing" create a metallurgical bonding environment.

The satisfaction of all these requirements simultaneously for a full range of applications implies a wide variety of wedge configurations, which vary primarily to allow tool and wire clearance of obstacles on or near the pad. Wedge configurations possess three main design elements: the bonding foot; the hole and wire feed angle; and the tip-to-shank ratio.

No definite values for the parameters of force, time, and power can be given for an optimum bonding schedule because of different wire bonding surfaces, semiconductor die, and package characteristics.

The general guideline for establishing optimum bonding is that the bonding parameters be adjusted so that reducibility is maximum yet high bond pull strength is maintained.

Dimensional Variables

Bonding wedge dimensions vary primarily to permit access of the tool and wire to tightly confined points on the pad.

The overall tip length and width, and the tip clearance dimensions are important considerations in the selection of a wedge for a given task.

Profile

-- FIG. 5 --

The face of the bonding foot may be flat or concave, the latter being the most widely accepted configuration. The concave face creates an inward force component which keeps the wire toward the center of the foot. Flat faced wedges present the possibility of off-center bonds in which wire material is squeezed off to the side.

Wire Diameter:

Wire size is selected on the basis of device requirements and bonding pad size. One mil AL, 1 % Si wire is used in most devices; however, usage of 1 ¼ mil diameter is growing.

Elongation: Low elongation ($\frac{1}{2}$ - $1 \frac{1}{2}$) is normally required so the wire may be broken after the second bond. Too great elongation results in excessive rebonding.

Tensile Strength: Relatively hard wire is needed for small diameter wire (< 2 mil) with tensile strength ranging from 15-19 grams for 1 mil and 19-21 for ¼ mil. Higher tensile strength (harder) may fracture silicon (cratering), under the bond. Lower tensile strength (softer) wire reduces the range of bonding schedules.

Concave Bonding Wedges

The Concave Bonding Wedge is offered for customers using small diameter aluminum bonding wire. Small diameter wire is generally viewed as wire that runs between .001" dia. Up to .002". Aluminum wire (small) is offered in the following diameters. .001", .00125", .0015" and .002". Anything over .002" diameter is usually considered a large wire application.

Additionally, the Concave Bonding Wedge is used for bonding aluminum wire, because the arch at the back of the bond foot offers additional material thickness, and thus strength for the wire. Aluminum wire is very brittle and needs this additional thickness to minimize the chance that the aluminum wire could easily break at the heel of the bond foot.

Concave With Side Flats

This tool is identical to the "Concave" tool and is used for the same reasons. However, occasionally we will have a customer using gold wire with the concave style tip. As a result, the outside edges of the wedge may contact the bonding surface when the bonding wire is deformed. To prevent the tool contact on the edges, we offer side flats to give extra clearance, thus eliminating the tool contact to the bonding surface.

THE CSF BONDING TOOL

Greatly extended tool life and improved "pull strength" are the principal attributes of the newly developed CSF Bonding Tool. Extensive testing at numerous semiconductor plants indicate an expected tool life 300% to 500% above that experienced using concave tools. Comparative pull test data show an increase in average bond strength with an accompanying decrease in standard deviation.

Photograph No. 1 illustrates the highly polished side flats which minimize edge erosion and protect both tool and die in the event of accidental contact.

Photo 1. DeWeyl CSF Ultrasonic Bonding Tool
This photo shows are CS-Series with a A6 option

Photo 2. Typical concave Ultrasonic Bonding Tool after 100,000 bonds

THE CSF BONDING TOOL

- EXTENDED TOOL LIFE
- HIGHER BOND STRENGTHS
- LESS BOND DOWN TIME
- LOWER COST PER BOND

Photograph No. 2 shows a standard concave tool after 100,000 bonds. The sharp edges have started the normal breakdown process. Micro-chipping will swiftly progress to ultimate tool failure—the typical wear-out mode of both concave and flat tool geometries.

Thermocompression Bonding

The microwave industry primarily uses a method called "thermocompression bonding" on gold wire.

Thermocompression bonding is used for bonding gold wire with heat, pressure and time. No ultrasonic energy is applied to the bond wire. This bonding process requires elevated temperatures during the bonding process when compared to "thermosonic bonding".

The heat is supplied by a heated workholder, which holds the part being bonded. The bonding wedge is usually heated as well. The bonding machine supplies the pressure as it pushes down the wedge onto the wire. The time or duration is how long the bonding wedge sits on the wire.

ThermoSonic Bonding

Thermosonic bonding is used for bonding gold wire with less heat, less pressure and less time, when compared to the thermocompression technique. This bonding process allows reduced temperatures during the bonding process.

The addition of ultrasonic energy is what allows all of the reductions in heat and pressure. The lower heat is still supplied by a heated workholder, which holds the part being bonded. The bonding wedge is usually unheated. The bonding machine supplies the lower pressure as it pushes down the wedge onto the wire. The time or duration is how long the bonding wedge sits on the wire and this time requirement is typically reduced as well.

The ultrasonic energy results from a mechanical vibration of the wedge at a standard frequency of 63khz. New high frequency systems offer frequencies of 110-120Khz. The ultrasonic vibration of the wedge is what allows all the reduction in forces and temperatures, and scrubs the bonding wire into the metal interface.

Wire Termination Methods

There are two basic methods that wire bonding equipment use to terminate the wire bond. The first is called clamp tear and the second is called table tear.

Clamp Tear

Just like it sounds, the wire bonding machine uses a set of clamp blades to clamp on to the wire immediately after the last wire bond contact is made and the clamps actually move back and pull on the wire with enough force to break the wire. This wire clamp movement must be done while the bonding wedge is in contact with the wire. The tool is pressing down on the wire while the clamps are pulling on the wire.

This sequence is very important. If the wedge is not holding the pressure down on the wire, the clamp pull force would likely lift up the already bonded wire connection. How does the wire know where to break? The wire will break at its weakest point. Where is that weakest point? If we assume that the correct bonding wedge is used, the weakest location will be at the back radius of the tool. This semi-sharp portion of the tool is designed to weaken the wire strength and allow for the wire to break at a predictable location. Many manual machines and a some automatic wire bonders use this technique to terminate the wire.

Table Tear

This method still utilizes a set of clamp blades, however the clamps only clamp on the wire and do not have a motion to pull back on the wire. Instead, the wire bonding machine lifts up the wedge after the last bond is complete. This lift elevation is extremely low and is measured in just a few thousandths of an inch. After the tool lifts from the surface, the table moves such that the tool steps back and as a result breaks the wire.

Once again, how does it know where to break? The back of the bond foot has been weakened by the back radius design of our wedge. As a result of the semi-sharp back radius, the wire breaks at the desired location.

Since this wire termination method requires some motorized table movement, it is almost exclusively used on automatic wire bonders. The automatic equipment engineers like to use this method out of consideration for bonding speed. They can perform a table tear method faster than trying to perform a clamp tear sequence, because every fraction of a second is considered.

VERTICAL FEED / DEEP ACCESS

OPTIONS FOR DEEP ACCESS APPLICATIONS

DeWeyl Tool has the wedge technology solution for all application needs. The following highlights a few of our many product offerings. Please refer to the Tool Options page for other design solutions to common problem situations that can occur during normal bonding applications.

VERTICAL FEED / DEEP ACCESS

DeWeyl Tool continues to offer the industry's first high technology bonding wedge for deep access applications, as well as for standard wire feed angles. Our Vertical Feed/Deep Access bonding wedges offer significant solutions in maintaining maximum looping and tail control.

Our product line includes a wide selection of Vertical Feed/Deep Access bonding tool solutions for manual, semi-automatic and automatic bonding equipment. A minimum of three material choices are available for your consideration: Tungsten Carbide, Titanium and Ceramic. Additionally, our vertical feed bonding wedges are offered with 45 degree, 52 degree and 60 degree feed hole angles.

DeWeyl Tool understands that today's complex Vertical Feed applications require gold bonding of .0007" diameter wire. Our extensive micro-machining experience has allowed the development of wedges for eve .0005" diameter wire, utilizing bond lengths of .0005" and feed holes of .001".

The DeWeyl Vertical Feed tools, along with their basic design specifications, are indicated accordingly within our online and PDF catalogs. Please visit the appropriate wedge style category for your specific needs, or consult your local representative or the DeWeyl factory to discuss your application requirements.

DeWeyl has developed an exclusive design for the Vertical Feed/Deep Access applications identified as the "A8D" option. This feature maintains maximum control during the looping and feeding operations of your equipment, and is highly recommended for maximum Vertical Feed/Deep Access performance. Please pay particular attention to the "Problem and Solution" drawings on the Tool Options page.

Note: The A8D option is not suitable for use with **F&K Delvotec** and **Hesse Mechatronics** machines.

TECHNICAL DATA

"V" GROOVE BOND LENGTH ILLUSTRATION

In this illustration we are showing a "V" Groove bonding foot for larger wire, .003 through .0160 Notice that the FL (Foot Length) and the BL (Bond Length) are the same dimension. When choosing a tool size use the following bonding formula:

70% of the FR (Front Radius) plus the BF (Bond Flat) plus 35% of the BR (Back Radius) equals the BL (Bond Length).

Example: $.70 (.002 \text{ FR}) + .0021 \text{ BF} + .35 (.007 \text{ BR}) = .006 \text{ BL}$

For this size bond length you may need a pad size of .0075 using 80% coverage of bond pad in wire direction. In this case the tool size you would choose from our dimension chart for .003 diameter wire would be 4560. Again, the sizes on our chart are the most common, but you may choose any size using this formula.

On "V" Groove Tools the Foot Length (FL) equals Bond Length (BL).

TECHNICAL DATA

SMALL WIRE BOND LENGTH ILLUSTRATION

We are showing our style of Concave tool in the Small Wire Illustration with instruction on how to determine bond length and how the bond would look. Bond length is the bottom surface of the wire that is bonded to the chip. We calculate the bond length by adding the bond flat dimension plus **1/3 of the FR (Front Radius) dimension plus 1/3 of the BR (Back Radius) dimension**. So when trying to decide what tool size to choose, find the smallest pad size within the package and multiply 50% to 70% times the pad size in the wire direction. One concern here is to understand how much space you need for targeting your wire onto the bonding pad. Some operators need less space than others. If this is the case then you may want to use a larger % basis to determine a larger bond length. The tool sizes shown in our catalog are the most common but you may select any size that is not shown by using this formula.

Example: 50% x .002 (pad size) = .001 (bond length)

For .0007 wire your selection for tool size would be 1510.

$$\text{Bond Flat (BF)} + \frac{1}{3} \text{ Front Radius (FR)} + \frac{1}{3} \text{ Back Radius (BR)} = \text{Bond Length (BL)}.$$

Front Radius and Back Radius

The front radius and back radius of the bonding tool can sometimes seem like something rather insignificant. But actually, the proper selection of radii, especially the back radius, is very important to the strength of the wire bond system. The FR and BR need to be modified based on the type of wire being bonding, i.e. gold or aluminum. You must also consider the wire size when deciding the size of the radius. Generally speaking, gold wire will use a smaller back radius to help cut the wire cleanly. Aluminum wire is harder and more brittle. It needs to have a smoother radius to prevent cracking of the wire.

Front Radius (FR) The front radius of the bond tool needs consideration on the second bond. The first bond does not matter much with regard to the front radius. The front radius' main job is to offer a smooth and gentle transition between the bond flat and the wire diameter at the second bond contact. The most common choices for the **front radius on .001" diameter wire is FR= .001" for both aluminum and gold wire.**

Back Radius (BR) The back radius is the critical radius. If this is selected incorrectly an aluminum wire may break very easily or a gold wire may not terminate properly. The most common choices for the **back radius on .001" diameter wire is BR= .001" for aluminum wire and BR= .0005" for gold wire.**

ULTRASONIC GOLD WIRE AND RIBBON BONDING

Deep Access-Vertical Feed Applications

DeWeyl Tool Company continues to offer the industries first high technology bonding wedge for “deep access” applications as well as standard wire feed angles. DeWeyl's “deep access” or “vertical feed” bonding wedges offer significant solutions in maintaining maximum looping and tail control. DeWeyl vertical feed bonding wedges are offered with 45°, 52° and 60° feed hole angles. Common bonding wedge materials such as Tungsten Carbide and Titanium Carbide have exhibited specific performance limitations thus DeWeyl Tool Company developed the industries first ceramic tip-bonding wedge.

DeWeyl's ceramic tip bonding wedge offers a unique and enhanced surface texture. This surface texture allows optimum ultrasonic coupling with the wire structure. This results in a superb *tool to wire* interface and thus efficient ultrasonic energy transfer. The DeWeyl ceramic tip wedge offers impressive benefits for gold wire, aluminum wire and gold ribbon ultrasonic applications. Here are some of the reported advantages when using DeWeyl's ceramic tip wedge:

- ❖ INCREASED BOND ADHESION
- ❖ INCREASED PULL TEST RESULTS
- ❖ ULTRASONIC OUTPUT REDUCTION
- ❖ EXTENDED WEDGE LIFE
- ❖ IMPROVED BOND DEFINITION
- ❖ GOLD BONDING AT AMBIENT TEMPERATURES

In addition to the ceramic tip wedges, DeWeyl has developed an exclusive design for the “vertical feed” applications identified as the “A8D” option. This feature maintains maximum control during the looping and feeding operations of your equipment. It is highly recommended for maximum vertical feed/deep access performance.

Note: The A8D option is not suitable for use with **F&K Delvotec** and **Hesse Mechatronics** machines.

In order to take full advantage of the ceramic tip tool on ultrasonic gold wire applications we recommend using 0.5-2% wire elongation. This wire elongation will offer the best response to the ultrasonic energy. However, some applications may find acceptable performance from 1-3% wire elongation. Thick film applications may find additional advantages in using a cross-groove style bonding tip in addition to the ceramic material.

DeWeyl Tool Company understands that today's complex vertical feed applications require gold bonding of .0007” diameter wire. Our extensive micro-machining experience has allowed the development of wedges for even .0005” diameter wire, utilizing bond lengths of .0005” and feed holes of .001”. Please do not hesitate to consult your local representative or call the factory direct to discuss your application requirement. DeWeyl Tool Company has the wedge technology solution for your application.

ULTRASONIC BONDING

PROCESS

Ultrasonic wedge bonding presents an alternative to thermo-sonic and thermo-compression bonding techniques.

The key difference between the two is that the latter employs heat energy, while ultrasonic bonding uses mechanical energy together with pressure and time to effect a bond.

The ultrasonic technique is applicable with materials of low heat tolerance, and particularly, to the bonding of aluminum wire. Ultrasonic bonding to date, is the most successful and proven method for work with aluminum.

In the ultrasonic bonding process, a metallurgical bond is achieved through the proper transmittal of ultrasonic energy under pressure to the bond interface. Consistent and reliable bonding requires optimized parameters as illustrated in the following paragraphs. The parameters to consider are power, clamping force (pressure), time, mating of tool geometry with wire, and bonding pad and package condition.

Fig. 1 - Bond Pull Strength vs. Deformed Width or Ultrasonic Power

Figure 1 shows the relationship of the bond pull strength in percent of ultimate wire tensile strength to the deformed width of the bond (see Fig. 2). Three sets of curves of bond pull strength versus power, time, or clamping force can be obtained by varying one of these parameters while holding the other two constant at their optimum. Each curve is similar to, and can be related to, the curve of bond pull strength versus wire deformed width.

As each parameter is increased, the weldment grows stronger in lift off strength through bond growth. At the same time, due to wire deformation, the transition from the wire into the weldment becomes weaker. The failure mode changes from weldment failure (lift off) to wire breakage failure. Maximum pull strength is at the intersection of the two failure modes. Lowest reproducibility is within the lift off failure mode and within the breakage failure mode after the deformed width exceeds two times the wire diameter. Highest reproducibility is within the breakage failure mode, directly after, but less than the maximum pull strength.

CERAMIC

Introducing the newest technology in gold wire and ribbon bonding.

DeWeyl has always strived to bring the finest line of wedge type bonding tools to the industry and has done so for more than thirty years.

Now we bring a new ceramic material to the industry that has more superior bonding qualities than any other material on the market today. This new material is a type of silicon nitride specially selected for our great line of tools. We researched this area quite extensively until we found just the right matrix.

Now you have a new material selection and, as always DeWeyl quality, which, when matched with our new designs give you a precision made, superior quality bonding tool that we call our SUPER TOOL.

If you have any questions please be encouraged to call

our customer service department.

info@deweyl.com

The Ceramic Advantage

Why Ceramic?

DeWeyl Tool developed the industry's first Ceramic tip bonding wedge, because common bonding wedge materials such as Tungsten Carbide and Titanium exhibited specific performance limitations.

The ceramic material is bonded to a tungsten carbide shank utilizing, once again, a process developed and mastered by DeWeyl Tool. And, while designed primarily for ultrasonic bonding of gold wire, many customers have reported tremendous tool life while bonding aluminum wire with very little aluminum build up on the bond flat. Please refer to the [Recommendations](#) page for further details.

BENEFITS

Our Ceramic tip wedge offers impressive benefits for both gold wire, aluminum wire and gold ribbon ultrasonic applications. It also has a proven track record on both production and R&D products. Here are some of the reported advantages when using our Ceramic tip wedge:

- Increased Bond Adhesion
- Increased Pull Test Results
- Ultrasonic Output Reduction
- Extended Wedge Life
- Improved Bond Definition
- Gold Bonding at Ambient Temperatures
- Improved Production Yields

ULTRASONIC EFFICIENCY

One of the most significant benefits of the DeWeyl Ceramic wedge is the excellent tool to wire interface. The ideal ultrasonic bonding wedge allows for zero tool slippage while in contact with the wire and during the application of ultrasonic energy. If the tool has zero slippage then the ultrasonic transfer of energy is operating at 100%. This is the value of the Ceramic wedge. The naturally porous structure of the Ceramic offers a surface texture that couples with the wire giving optimum ultrasonic transfer. This efficiency in transfer allows for a reduction in ultrasonic power and time levels, which results in a superb tool-to-wire interface and thus efficient ultrasonic energy transfer. Difficult applications due to low bonding temperature or contaminated bond surfaces are made easier with the use of the Ceramic tool.

ECONOMICAL

The standard angle feed Ceramic wedge (non vertical feed) costs only 8% more than the cost of titanium. And the cost of a vertical feed Ceramic tool is only 18% more expensive than the cost of titanium. The additional cost for ceramic becomes very economical when DeWeyl customers understand that the life expectancy of Ceramic is 2-3 times greater than other available materials. The net cost per bond thus is significantly lower with the Ceramic wedge.

The Ceramic Advantage

CLIENT RECOMMENDATIONS / TESTIMONIALS

Since 1969, DeWeyl Tool has provided some of the best and most reliable wedge bonding tools in the industry. Our customer list is extensive – from well known research universities to high volume manufacturers overseas. No matter if you are looking for 1 tool or 50,000 per year, give us a call or email us. While we have an extensive listing of tools and combinations on our web site, we also provide custom configurations to meet all of your bonding needs.

CLIENT RECOMMENDATIONS GOLD WIRE

Many customers have discovered that gold wedge bonding at room temperature is dramatically enhanced by utilization of the ceramic wedge.

BONDING ALUMINUM WITH CERAMIC TIP

The Ceramic wedge tool is primarily designed for ultrasonic bonding of gold wire. However, many customers have reported tremendous tool life while bonding aluminum wire with very little aluminum build up on the bond flat. To reap the rewards of using our Ceramic tool you will need to follow a few recommendations. Use .5 to 2 percent wire elongation. You can also use 1 to 3 percent elongation with good results. If you use 3 to 5 percent elongation, results will be over-bonding because the wire is too soft. Next use very low channel settings to start with as well as low heat since our ceramic material has excellent coupling features and produces a very efficient bonding scrub. Then increase your power and heat if needed until you obtain the desired results. If you are bonding to thick film you probably will require a Cross Groove style tip to obtain more scrubbing action.

CLIENT TESTIMONIALS

In a recent survey, we collected input from Customers, Equipment Manufacturers and DeWeyl Reps. Following is some of the feedback we received:

- "Even though I only needed at most a half dozen wedge tools, the customer support treated me as though I had ordered a thousand or more; I felt I mattered to them."
- "You had what we needed and we received our product in a timely manner."
- "Customer Service always made our quote and ordering process very quick and easy."
- "We once compared the bonding characteristics of DeWeyl ceramic with (competitor) ceramic; DeWeyl ceramic performed better. "
- "Very good tool for Au and deep access applications."
- "The best in your industry!"
- "The R&D Director is quite happy with the wedge tool (as) he is having a problem with others."
- "Easy to do custom orders."
- "We are extremely happy with the tools."
- "We use the A8D option and we are extremely pleased with the tool."

We recommend a .0005" back radius and a cross groove or a flat bond foot when ordering tools for gold wire thermosonic bonding. For more gold wire application information see Tech Tip

AN-SERIES SMALL WIRE

.0005" through .0020" wireØ

AN-SERIES LARGE WIRE

For wire diameters .0030" through .0160"

Standard: Ø 1/16, 45° Hole Angle

AN-V SERIES VERTICAL FEED DEEP ACCESS

.0005" through .0020" wireØ

Standard: Ø 1/16 45° Hole Angle

SERIES AN & AN-V

SMALL WIRE & LARGE WIRE

ORDERING INFORMATION
SMALL & LARGE WIRE BONDING WEDGES
FOR GOLD AND ALUMINUM WIRE

SAMPLE PART NUMBER: **M-AN-O-X-1/16-1-45-CG-2020-M- ***

SYMBOL EXPLANATION: 1 2 3 4 5 6 7 8 9 10 11

- MATERIAL:**
 - M = Ceramic
 - C = Tungsten Carbide
 - T = Titanium
 - All other: See Material Selection Guide
- SERIES:** AN
- WIRE FEED:** O = Standard Feed
V = Vertical Feed
- FRONT/BACK RADIUS:** See Radius Option Chart
*For special Radius sizes insert an X Please specify FR/BR
- SHANK DIA.:** Please Specify Diameter
- TOOL LENGTH:** Please Specify Length
- HOLE ANGLE:** for AN (30°, 38°, 45°)
for AN-V (45°)

(11) See Tool Option

(10) FOOT FINISH:

M = Matte finish (FR, BR, & Bond Flat)
P = Polish finish (FR, BR, & Bond Flat)
MP = Polish finish (FR, BR), and
Matte finish (Bond Flat)

(9) TOOL SIZE: See Standard Chart

(8) FOOT TYPE:

F = Flat
C = Concave
CSF = Concave with Side Flats
(CSF not available with ceramic tools)
CG = Cross Groove
GW = Groove in wire direction
(Please specify wire size)
DT = Diamond Tip (Please specify Ribbon size)
VG = V Groove (Please specify wire size)

*NOTE: Please specify for either guillotine cut or tension break.

On V-groove tools the bond length (BL) is the same as the foot length (FL).

For special sizes or dimensions insert an (X) in the appropriate position of the part number then specify what (X) equals.

Example: M-AN-O-X-1/16-3/4-45-CG-2020-M (X) FR=.0012, BR=.0007

RADIUS OPTION CHART	OPTION LETTER		A	B	C	D	E	F	G	H	I	J	K	L	M	N

We recommend a .0005" back radius and a cross groove or a flat bond foot when ordering tools for gold wire thermosonic bonding. For more gold wire application information see Tech Tip

C-SERIES SMALL WIRE

.0005" through .0020" wireØ

C-SERIES LARGE WIRE

For wire diameters .0030" through .0160"

C-V SERIES VERTICAL FEED DEEP ACCESS

.0005" through .0020" wireØ

Standard: Ø 1/16, 45° to 52° Hole Angle : BS"=.045" (1.14mm) .
Supplies only to Standard size Ø1/16, **larger tool Ø are different.**
Standard: (BS) supplied unless otherwise specified. See Tool Options #A3

NOTE: We recommend our A8D option for enhanced wire control. Our standard vertical feed has slightly more clearance but less wire control. See in **Tool Options** for illustration.

To order just add A8D in space **11**.

Not suitable for F&K and Hesse Mechatronics machine

A8D Option

Hole Angles Available with A8D Option		
Hole Angle	BSV	
	in.	mm
45°	.035	.89
52°	.050	1.27

Standard: Ø1/16 45°to 52° Hole Angle :
FS=.015"(.38mm) **BS"=.045"** (1.14mm)
 Standard: (FS&BS) supplied unless
 otherwise specified. See Tool Options #A3
No FS if T=MAX

SERIES C & C-V

SMALL WIRE & LARGE WIRE

ORDERING INFORMATION
SMALL & LARGE WIRE BONDING WEDGES
FOR GOLD AND ALUMINUM WIRE

SAMPLE PART NUMBER: M-C-O-X-1/8-1-45-VG-6008-M-*

SYMBOL EXPLANATION: 1 2 3 4 5 6 7 8 9 10 11

- MATERIAL:**
 - M = Ceramic
 - C = Tungsten Carbide
 - T = Titanium
 - All other: See Material Selection Guide
 - SERIES: C**
 - WIRE FEED:** O = Standard Feed
V = Vertical Feed
 - FRONT/BACK RADIUS:** See Radius Option Chart
*For special Radius sizes insert an X Please specify FR/BR
 - SHANK DIA.:** Please Specify Diameter
 - TOOL LENGTH:** Please Specify Length
 - HOLE ANGLE:** for C (30°, 38°, 45°, 52°, 55°, 60°) for C-V (45°, 55°, 60°)
for C-V with A8D-Opt. (45°, 52°)
- *NOTE: Please specify for either guillotine cut or tension break.
On V-groove tools the bond length (BL) is the same as the foot length (FL).
For special sizes or dimensions insert an (X) in the appropriate position of the part number then specify what (X) equals.
Example: M-C-O-X-1/16-3/4-45-CG-2020-M (X) FR=.0012, BR=.0007
On V-groove tools the bond length is the same as the foot length.
- (11) See Tool Option
- (10) FOOT FINISH:
M = Matte finish (FR, BR, & Bond Flat)
P = Polish finish (FR, BR, & Bond Flat)
MP= Polish finish (FR, BR), and Matte finish (Bond Flat)
- (9) TOOL SIZE: See Standard Chart
- (8) FOOT TYPE:
F = Flat
C = Concave
CSF = Concave with Side Flats (CSF not available with ceramic tools)
CG = Cross Groove
GW = Groove in wire direction (Please specify wire size)
DT = Diamond Tip
VG = V Groove

TOOL SIZE=TS, WIRE DIAMETER =WD "T" To be determined according to the size of FR and BR and Hole Bore Length

FOR AUTOMATIC BONDERS

We recommend a .0005" back radius and a cross groove or a flat bond foot when ordering tools for gold wire thermosonic bonding. For more gold wire application information see Tech Tip

CL-SERIES LARGE WIRE

For wire diameters .0030" through .0160"

NOTE: We recommend our A8D option for enhanced wire control. Our standard vertical feed has slightly more clearance but less wire control. See in **Tool Options** for illustration.

To order just add A8D in space **11**.

Not suitable for F&K and Hesse Mechatronics machine

Standard: Ø 1/16, 45° to 52° Hole Angle : BS"=.045" (1.14mm) .
Supplies only to Standard size Ø1/16, **larger tool Ø are different.**
Standard: (BS) supplied unless otherwise specified. See Tool Options #A3

A8D Option

Hole Angles Available with A8D Option		
Hole Angle	BSV	
	in.	mm
45°	.035	.89
52°	.050	1.27

Standard: Ø1/16 45°to 52° Hole Angle :
FS=.015"(.38mm) **BS=.045"** (1.14mm)
 Standard: (FS&BS) supplied unless
 otherwise specified. See Tool Options #A3
No FS if T=MAX

5. SHANK DIA.: Please Specify Diameter

6. TOOL LENGTH: Please Specify Length

7. HOLE ANGLE: for CL (30°, 38°, 45°, 52°, 55°, 60°), for CL-V (45°, 55°, 60°) for CL-V with A8D Opt. (45°, 52°)

*NOTE: Please specify for either guillotine cut or tension break.

On V-groove tools the bond length (BL) is the same as the foot length (FL).

For special sizes or dimensions insert an (X) in the appropriate position of the part number then specify what (X) equals.

Example: M-CL-O-X-1/16-3/4-45-CG-2020-M (X) FR=.0012, BR=.0007

On V-groove tools the bond length is the same as the foot length.

(11) See Tool Option

(10) FOOT FINISH:

M = Matte finish (FR, BR, & Bond Flat)
P = Polish finish (FR, BR, & Bond Flat)
MP = Polish finish (FR, BR), and
Matte finish (Bond Flat)

(9) TOOL SIZE: See Standard Chart

(8) FOOT TYPE:

F = Flat
C = Concave
CSF = Concave with Side Flats
(CSF not available with ceramic tools)
CG = Cross Groove
GW = Groove in wire direction
(Please specify wire size)
DT = Diamond Tip (Please specify Ribbon size)
VG = V Groove (Please specify wire size)

FLAT

CROSS GROOVE

We recommend a .0005" back radius and a cross groove or a flat bond foot when ordering tools for gold wire thermosonic bonding. For more gold wire application information see Tech Tip

CN SERIES SMALL WIRE

.0005" through .0020" wireØ

CN SERIES LARGE WIRE

For wire diameters .0030" through .0160"

Standard: Ø 1/16, 45° to 52° Hole Angle : BS"=.045" (1.14mm) .
Supplies only to Standard size Ø 1/16, **larger tool Ø are different.**
Standard: (BS) supplied unless otherwise specified. See Tool Options #A3

NOTE: We recommend our A8D option for enhanced wire control. Our standard vertical feed has slightly more clearance but less wire control. See in **Tool Options** for illustration. To order just add A8D in space 11. Not suitable for F&K and Hesse Mechatronics machine

A8D Option

Hole Angle	BSV	
	in.	mm
45°	.035	.89
52°	.050	1.27

Standard: Ø 1/16 45° to 52° Hole Angle : FS=.015" (.38mm) BS"=.045" (1.14mm)
Standard: (FS&BS) supplied unless otherwise specified. See Tool Options #A3
No FS if T=MAX

SERIES CN & CN-V

SMALL WIRE & LARGE WIRE

ORDERING INFORMATION
SMALL & LARGE WIRE BONDING WEDGES
FOR GOLD AND ALUMINUM WIRE

SAMPLE PART NUMBER: M-CN-O-X-1/16-1-45-CG-2020-M-*

SYMBOL EXPLANATION: 1 2 3 4 5 6 7 8 9 10 11

1. MATERIAL:

M = Ceramic
C = Tungsten Carbide
T = Titanium

All other: See Material Selection Guide

2. SERIES: CN

3. WIRE FEED: O = Standard Feed
V = Vertical Feed

4. FRONT/BACK RADIUS: See Radius Option Chart

*For special Radius sizes insert an X Please specify FR/BR

5. SHANK DIA.: Please Specify Diameter

6. TOOL LENGTH: Please Specify Length

HOLE ANGLE: for CN (30°, 38°, 45°, 52°, 55°, 60°), for CN-V (45°, 55°, 60°)
for CN-V with A8D Opt.(45°, 52°)

*NOTE: Please specify for either guillotine cut or tension break.

On V-groove tools the bond length (BL) is the same as the foot length (FL).

For special sizes or dimensions insert an (X) in the appropriate position of the part number then specify what (X) equals.

Example: M-CN-O-X-1/16-3/4-45-CG-2020-M (X) FR=.0012, BR=.0007

(11) See Tool Option

(10) FOOT FINISH:

M = Matte finish (FR, BR, & Bond Flat)
P = Polish finish (FR, BR, & Bond Flat)
MP = Polish finish (FR, BR), and
Matte finish (Bond Flat)

(9) TOOL SIZE: See Standard Chart

(8) FOOT TYPE:

F = Flat
C = Concave
CSF = Concave with Side Flats
(CSF not available with ceramic tools)
CG = Cross Groove
GW = Groove in wire direction
(Please specify wire size)
DT = Diamond Tip (Please specify Ribbon size)
VG = V Groove (Please specify wire size)

We recommend a .0005" back radius and a cross groove or a flat bond foot when ordering tools for gold wire thermosonic bonding. For more gold wire application information see Tech Tip

CS-SERIES SMALL WIRE

.0005" through .0020" wireØ

CS-SERIES LARGE WIRE

For wire diameters .0030" through .0160"

CS-V SERIES VERTICAL FEED DEEP ACCESS

.0005" through .0020" wireØ

Standard: Ø 1/16, 45° to 52° Hole Angle : BS"=.045" (1.14mm) .
Supplies only to Standard size Ø1/16, **larger tool Ø are different.**
Standard: (BS) supplied unless otherwise specified. See Tool Options #A3

NOTE: We recommend our A8D option for enhanced wire control. Our standard vertical feed has slightly more clearance but less wire control. See in **Tool Options** for illustration. To order just add A8D in space 11. Not suitable for F&K and Hesse Mechatronics machine

A8D Option

Hole Angle	BSV	
	in.	mm
45°	.035	.89
52°	.050	1.27

Standard: Ø1/16 45° to 52° Hole Angle :
FS=.015" (.38mm) **BS"=.045"** (1.14mm)
Standard: (FS&BS) supplied unless otherwise specified. See Tool Options #A3
No FS if T=MAX

Diamond Tip=DT preferably for large Tools
Minimum of Groove Radius=.00025
Groove to Groove=.0015

SMALL WIRE & LARGE WIRE

ORDERING INFORMATION
SMALL & LARGE WIRE BONDING WEDGES
FOR GOLD AND ALUMINUM WIRE

SAMPLE PART NUMBER: M-CS-O-X-1/16-1-45-CG-2020-M-*

SYMBOL EXPLANATION: 1 2 3 4 5 6 7 8 9 10 11

- MATERIAL:**
 - M = Ceramic
 - C = Tungsten Carbide
 - T = Titanium
 - All other: See Material Selection Guide
- SERIES:** CS (small Wire), CS (large Wire)
- WIRE FEED:** O = Standard Feed
V = Vertical Feed
- FRONT/BACK RADIUS:** See Radius Option Chart
*For special Radius sizes insert an X Please specify FR/BR
- SHANK DIA.:** Please Specify Diameter
- TOOL LENGTH:** Please Specify Length
- HOLE ANGLE:** for CS, (30°, 38°, 45°, 52°, 55°, 60°)
for CS-V(45°, 55°, 60°) for CS-V with A8D Opt.(45°, 52°)

(11) See Tool Option

(10) FOOT FINISH:

M = Matte finish (FR, BR, & Bond Flat)
P = Polish finish (FR, BR, & Bond Flat)
MP = Polish finish (FR, BR), and
Matte finish (Bond Flat)

(9) TOOL SIZE: See Standard Chart

(8) FOOT TYPE:

F = Flat
C = Concave
CSF = Concave with Side Flats
(CSF not available with ceramic tools)
CG = Cross Groove
GW = Groove in wire direction
(Please specify wire size)
DT = Diamond Tip (Please specify Ribbon size)
VG = V Groove (Please specify wire size)

*NOTE: Please specify for either guillotine cut or tension break.

On V-groove tools the bond length (BL) is the same as the foot length (FL).

For special sizes or dimensions insert an (X) in the appropriate position of the part number then specify what (X) equals.

Example: M-CS-O-X-1/16-3/4-45-CG-2020-M (X) FR=.0012, BR=.0007

- SERIES:** KN
- WIRE FEED:** O = Standard Feed
V = Vertical Feed
- FRONT/BACK RADIUS:** See Radius Option Chart
*For special Radius sizes insert an X Please specify FR/BR
- SHANK DIA.:** Please Specify Diameter
- TOOL LENGTH:** Please Specify Length
- HOLE ANGLE:** for KN (30°, 38°, 45°, 55°, 52°, 60°), for KN-V (45°, 55°, 60°)
for KN-V with A8D Opt.(45°, 52°)

(11) See Tool Option

(10) FOOT FINISH:

M = Matte finish (FR, BR, & Bond Flat)
P = Polish finish (FR, BR, & Bond Flat)
MP = Polish finish (FR, BR), and
Matte finish (Bond Flat)

(9) TOOL SIZE: See Standard Chart

(8) FOOT TYPE:

F = Flat
C = Concave
CSF = Concave with Side Flats
(CSF not available with ceramic tools)
CG = Cross Groove
GW = Groove in wire direction
(Please specify wire size)
DT = Diamond Tip (Please specify Ribbon size)
VG = V Groove (Please specify wire size)

*NOTE: Please specify for either guillotine cut or tension break.

On V-groove tools the bond length (BL) is the same as the foot length (FL).

For special sizes or dimensions insert an (X) in the appropriate position of the part number then specify what (X) equals.

Example: M-KN-O-X-1/16-3/4-45-CG-2020-M (X) FR=.0012, BR=.0007

FLAT

CROSS GROOVE

We recommend a .0005" back radius and a cross groove or a flat bond foot when ordering tools for gold wire thermosonic bonding. For more gold wire application information see Tech Tip

KNL-SERIES SMALL WIRE

.0005" through .0020" wireØ

KNL-SERIES LARGE WIRE

For wire diameters .0030" through .0160"

Standard: Ø 1/16, 45° to 52° Hole Angle : BS"=.045" (1.14mm).
Supplies only to Standard size Ø 1/16, **larger tool Ø are different.**
Standard: (BS) supplied unless otherwise specified. See Tool Options #A3

NOTE: We recommend our A8D option for enhanced wire control. Our standard vertical feed has slightly more clearance but less wire control.

See in **Tool Options** for illustration.
To order just add A8D in space 11.
Not suitable for F&K and Hesse Mechatronics machine

A8D Option

Hole Angle	BSV	
	in.	mm
45°	.035	.89
52°	.050	1.27

Standard: Ø 1/16 45° to 52° Hole Angle : BS"=.045" (1.14mm)
Standard: (BS) supplied unless otherwise specified. See Tool Options
No Front Angle if T=MAX

ORDERING INFORMATION
SMALL WIRE BONDING WEDGES
FOR GOLD AND ALUMINUM WIRE

SAMPLE PART NUMBER: M-KNL-O-X-1/16-1-45-CG-2020-M-*

SYMBOL EXPLANATION: 1 2 3 4 5 6 7 8 9 10 11

- MATERIAL:** _____
M = Ceramic
C = Tungsten Carbide
T = Titanium
All other: See Material Selection Guide
- SERIES:** KNL _____
- WIRE FEED:** O = Standard Feed _____
V = Vertical Feed _____
- FRONT/BACK RADIUS:** See Radius Option Chart
*For special Radius sizes insert an X Please specify FR/BR
- SHANK DIA.:** Please Specify Diameter _____
- TOOL LENGTH:** Please Specify Length _____
- HOLE ANGLE:** for KNL (30°, 38°, 45°, 55°, 52°, 60°), for KNL-V (45°, 55°, 60°)
for KNL-V with A8D Opt.(45°, 52°)

(11) See Tool Option

(10) FOOT FINISH:

M = Matte finish (FR, BR, & Bond Flat)
P = Polish finish (FR, BR, & Bond Flat)
MP = Polish finish (FR, BR), and
Matte finish (Bond Flat)

(9) TOOL SIZE: See Standard Chart

(8) FOOT TYPE:

F = Flat
C = Concave
CSF = Concave with Side Flats
(CSF not available with ceramic tools)
CG = Cross Groove
GW = Groove in wire direction
(Please specify wire size)
DT = Diamond Tip (Please specify Ribbon size)
VG = V Groove (Please specify wire size)

*NOTE: Please specify for either guillotine cut or tension break.

On V-groove tools the bond length (BL) is the same as the foot length (FL).

For special sizes or dimensions insert an (X) in the appropriate position of the part number then specify what (X) equals.

Example: M-KNL-O-X-1/16-3/4-45-CG-2020-M (X) FR=.0012, BR=.0007

TOOL SIZE=TS, WIRE DIAMETER=WD "T" To be determined according to the size of FR and BR and Hole Bore Length

SERIES KS & KS-V

SMALL WIRE & LARGE WIRE

FOR MANUAL AND SEMI-AUTOMATIC BONDERS

Available Vertical Hole Ø marked with X

	TD		TDF		For Vertical Hole
	in.	mm	in.	mm	
1/16	.0624	1.59	.0460	1.17	
1/16	.0624	1.59	.0590	1.50	X
	.0784	1.99	.0630	1.60	
	.0784	1.99	.0720	1.83	X
3/32	.0937	2.38	.0880	2.24	X
	.1180	3.00	.0985	2.50	
1/8	.1249	3.17	.0937	2.38	
1/8	.1249	3.17	.1180	3.00	

We recommend a .0005" back radius and a cross groove or a flat bond foot when ordering tools for gold wire thermosonic bonding. For more gold wire application information see Tech Tip

KS-SERIES SMALL WIRE

.0005" through .0020" wireØ

KS-SERIES LARGE WIRE

For wire diameters .0030" through .0160"

KS-V SERIES VERTICAL FEED DEEP ACCESS

SMALL WIRE .0005" through .0020" wireØ

Standard: Ø 1/16, 45° to 52° Hole Angle : BS"=.045" (1.14mm) .
Supplies only to Standard size Ø1/16, **larger tool Ø are different.**
Standard: (BS) supplied unless otherwise specified. See Tool Options #A3

NOTE: We recommend our A8D option for enhanced wire control. Our standard vertical feed has slightly more clearance but less wire control. See in **Tool Options** for illustration. To order just add A8D in space 11. Not suitable for F&K and Hesse Mechatronics machine

A8D Option

Hole Angle	BSV	
	in.	mm
45°	.035	.89
52°	.050	1.27

Standard: Ø1/16 45° to 52° Hole Angle :
BS"=.045" (1.14mm)
Standard: (BS) supplied unless otherwise specified. See Tool Options
No Front Angle if T=MAX

SERIES KS & KS-V

SMALL WIRE & LARGE WIRE

ORDERING INFORMATION
SMALL & LARGE WIRE BONDING WEDGES
FOR GOLD AND ALUMINUM WIRE

SAMPLE PART NUMBER: **M-KS-O-X-1/16-1-45-CG-2020-M-***

SYMBOL EXPLANATION: 1 2 3 4 5 6 7 8 9 10 11

1. MATERIAL: M = Ceramic
C = Tungsten Carbide
T = Titanium
All other: See Material Selection Guide

2. SERIES: KS

3. WIRE FEED: O = Standard Feed
V = Vertical Feed

4. FRONT/BACK RADIUS: See Radius Option Chart
*For special Radius sizes insert an X Please specify FR/BR

5. SHANK DIA.: Please Specify Diameter

6. TOOL LENGTH: Please Specify Length

7. HOLE ANGLE: for KS (30°, 38°, 45°, 52°, 55°, 60°) for KS-V (45°, 55°, 60°)
for KS-V with A8D Opt. (45°, 52°)

*NOTE: Please specify for either guillotine cut or tension break.

On V-groove tools the bond length (BL) is the same as the foot length (FL).

For special sizes or dimensions insert an (X) in the appropriate position of the part number then specify what (X) equals.

Example: M-KS-O-X-1/16-3/4-45-CG-2020-M (X) FR=.0012, BR=.0007

(11) See Tool Option

(10) FOOT FINISH:

M = Matte finish (FR, BR, & Bond Flat)

P = Polish finish (FR, BR, & Bond Flat)

MP = Matte finish (Bond Flat)

(9) TOOL SIZE: See Standard Chart

(8) FOOT TYPE:

F = Flat

C = Concave

CSF = Concave with Side Flats
(CSF not available with ceramic tools)

CG = Cross Groove

GW = Groove in wire direction
(Please specify wire size)

DT = Diamond Tip (Please specify Ribbon size)

VG = V Groove (Please specify wire size)

RADIUS OPTION CHART	OPTION LETTER		A	B	C	D	E	F	G	H	I	J	K	L	M	N

RIBBON WIRE

ORDERING INFORMATION
RIBBON WIRE BONDING WEDGES
FOR GOLD AND ALUMINUM WIRE

SAMPLE PART NUMBER: M-R-O-D-1/16-1-45-CG-.5x5-2-M-*

SYMBOL EXPLANATION:

1. MATERIAL:	1	2	3	4	5	6	7	8	9	10	11	12
M = Ceramic												
C = Tungsten Carbide												
T = Titanium												
All other: See Material Selection Guide												
2. SERIES: R												
3. WIRE FEED: O = Standard Feed												
V = Vertical Feed												
4. FRONT/BACK RADIUS: See Radius Option Chart												
*For special Radius sizes insert an X Please specify FR/BR												
5. SHANK DIA.: Please Specify Diameter												
6. TOOL LENGTH: Please Specify Length												
7. HOLE ANGLE: 30°, 38°, 45°, 52° 55°, 60°												

(12) See Tool Option

(11) **FOOT FINISH:**

M = Matte finish (FR, BR, & Bond Flat)

P = Polish finish (FR, BR, & Bond Flat)

MP = Polish finish (FR, BR), and Matte finish (Bond Flat)

(10) **Bond Length:** See Standard Chart
Example: BL of .0020 = 2
Note: We do not recommend bond lengths any larger than .005".

(9) **RIBBON SIZE:** See Standard Chart
Example: .0005 x .005 = .5 x 5
Thickness x Width

(8) **FOOT TYPE:** F = Flat
CG = Cross Groove
DT = Diamond Tip
(Please specify Ribbon size)

For special sizes or dimensions insert an (X) in the appropriate position of the part number then specify what (X) equals. Example: M-R-O-X-1/16-3/4-45-CG-.5x5-2-M-A7 (X) FR=.0012, BR=.0007

FLAT

CROSS GROOVE

We recommend a .0005" back radius and a cross groove or a flat bond foot when ordering tools for gold wire thermosonic bonding. For more gold wire application information see Tech Tip

RCS-SERIES RIBBON WIRE

Ribbon Width: .0020" through .030"

Ribbon Thickness: .00025" through .0020"

Standard: Ø 1/16, 45° to 52° Hole Angle : BS"=.045" (1.14mm) .
Supplies only to Standard size Ø1/16, **larger tool Ø are different.**
Standard: (BS) supplied unless otherwise specified. See Tool Options #A3

For all large Ø

RCS-V SERIES VERTICAL FEED DEEP ACCESS

Ribbon Width: .0020" through .030"

Ribbon Thickness: .00025" through .0020"

NOTE: We recommend our A8D option for enhanced wire control. Our standard vertical feed has slightly more clearance but less wire control. See in **Tool Options** for illustration. To order just add A8D in space 11. Not suitable for F&K and Hesse Mechatronics machine

A8D Option

available for ribbon widths up to .005

Hole Angle	BSV	
	in.	mm
45°	.035	.89
52°	.050	1.27

Standard: Ø1/16 45° to 52° Hole Angle :
FS=.015" (.38mm) **BS"=.045"** (1.14mm)
Standard: (FS&BS) supplied unless otherwise specified. See Tool Option #A3
No FS if T=MAX

RIBBON WIRE

ORDERING INFORMATION
RIBBON BONDING WEDGES
FOR GOLD AND ALUMINUM WIRE

SAMPLE PART NUMBER: M-RCS-O-D-1/16-1-45-CG-.5x5-2-M-*

SYMBOL EXPLANATION: 1 2 3 4 5 6 7 8 9 10 11 12

1. **MATERIAL:**
 - M = Ceramic
 - C = Tungsten Carbide
 - T = Titanium
 - All other: See Material Selection Guide
2. **SERIES:** RCS
3. **WIRE FEED:** O = Standard Feed
V = Vertical Feed
4. **FRONT/BACK RADIUS:** See Radius Option Chart
*For special Radius sizes insert an X Please specify FR/BR
5. **SHANK DIA.:** Please Specify Diameter
6. **TOOL LENGTH:** Please Specify Length
7. **HOLE ANGLE:** for RCS (30°, 38°, 45°, 52°, 55°, 60°, °) for RCS-V (45°, 55°, 60°, °)
for RCS-V with A8D Opt.(45°, 52°)
- (12) See Tool Option
- (11) **FOOT FINISH:**
 - M = Matte finish (FR, BR, & Bond Flat)
 - P = Polish finish (FR, BR, & Bond Flat)
 - MP = Matte finish (Bond Flat)
- (10) **Bond Length:** See Standard Chart
Example: BL of .0020 = 2
Note: We do not recommend bond lengths any larger than .005".
- (9) **RIBBON SIZE:** See Standard Chart
Example: .0005 x .005 = .5 x 5
Thickness x Width
- (8) **FOOT TYPE:**
 - F = Flat
 - CG = Cross Groove
 - DT = Diamond Tip
 - (Please specify Ribbon size)

For special sizes or dimensions insert an (X) in the appropriate position of the part number then specify what (X) equals. Example: M-RCS-O-X-1/16-3/4-45-CG-.5x5-2-M-A7 (X) FR=.0012, BR=.0007

RIBBON WIRE

ORDERING INFORMATION
RIBBON BONDING WEDGES
FOR GOLD AND ALUMINUM WIRE

SAMPLE PART NUMBER: M-RKN-O-D-1/16-1-45-CG-.5x5-2-M-*

SYMBOL EXPLANATION: 1 2 3 4 5 6 7 8 9 10 11 12

- MATERIAL:** M = Ceramic
C = Tungsten Carbide
T = Titanium
All other: See Material Selection Guide
- SERIES:** RKN
- WIRE FEED:** O = Standard Feed
V = Vertical Feed
- FRONT/BACK RADIUS:** See Radius Option Chart
*For special Radius sizes insert an X Please specify FR/BR
- SHANK DIA.:** Please Specify Diameter
- TOOL LENGTH:** Please Specify Length
- HOLE ANGLE:** for RKN (30°, 38°, 45°, 52°, 55°, 60°, °) for RKN-V (45°, 55°, 60°, °)
for RKN-V with A8D Opt.(45°, 52°)
- FOOT TYPE:** F = Flat
CG = Cross Groove
DT = Diamond Tip
(Please specify Ribbon size)
- Bond Length:** See Standard Chart
Example: BL of .0020 = 2
Note: We do not recommend bond lengths any larger than .005".
- RIBBON SIZE:** See Standard Chart
Example: .0005 x .005 = .5 x 5
Thickness x Width
- FOOT FINISH:** M = Matte finish (FR, BR, & Bond Flat)
P = Polish finish (FR, BR, & Bond Flat)
MP = Polish finish (FR, BR), and Matte finish (Bond Flat)
- See Tool Option**

For special sizes or dimensions insert an (X) in the appropriate position of the part number then specify what (X) equals. Example: M-RKN-O-X-1/16-3/4-45-CG-.5x5-2-M-A7 (X) FR=.0012, BR=.0007

1/8	.1249	3.17	.0937	2.38	
1/8	.1249	3.17	.1180	3.00	

We recommend a .0005" back radius and a cross groove or a flat bond foot when ordering tools for gold wire thermosonic bonding. For more gold wire application information see **Tech Tip**

RKS-SERIES

Ribbon Width: .0020" through .030"
Ribbon Thickness: .00025" through .0020"

For large Ø

Standard: Ø 1/16, 45° to 52° Hole Angle : BS"=.045" (1.14mm) .
Supplies only to Standard size Ø1/16, **larger tool Ø are different.**
Standard: (BS) supplied unless otherwise specified. See Tool Options #A3

RKS-V SERIES VERTICAL FEED DEEP ACCESS

NOTE: We recommend our A8D option for enhanced wire control. Our standard vertical feed has slightly more clearance but less wire control. See Tool Option for illustration. To order just add A8D in space 12. Not suitable for F&K and Hesse Mechatronics machine

A8D Option

Hole Angle	BSV	
	in.	mm
45°	.035	.89
52°	.050	1.27

Standard: Ø1/16 45° to 52° Hole Angle :
BS"=.045" (1.14mm)
Standard: (BS) supplied unless otherwise specified. See Tool Options
No Front Angle if T=MAX

SERIES RKS & RKS-V

RIBBON WIRE

ORDERING INFORMATION
RIBBON BONDING WEDGES
FOR GOLD AND ALUMINUM WIRE

SAMPLE PART NUMBER: M-RKS-O-D-1/16-1-45-CG-.5x5-2-M-*

SYMBOL EXPLANATION: 1 2 3 4 5 6 7 8 9 10 11 12

1. **MATERIAL:**
 - M = Ceramic
 - C = Tungsten Carbide
 - T = Titanium
 - All other: See Material Selection
2. **SERIES:** RKS
3. **WIRE FEED:** O = Standard Feed
V = Vertical Feed
4. **FRONT/BACK RADIUS:** See Radius Option Chart
*For special Radius sizes insert an X Please specify FR/BR
5. **SHANK DIA.:** Please Specify Diameter
6. **TOOL LENGTH:** Please Specify Length
7. **HOLE ANGLE:** for RKS (30°, 38°, 45°, 52°, 55°, 60°) for RKS-V (45°, 55°, 60°)
for RKS-V with A8D Opt.(45°, 52°)
- (12) See Tool Option
- (11) **FOOT FINISH:**
 - M = Matte finish (FR, BR, & Bond Flat)
 - P = Polish finish (FR, BR, & Bond Flat)
 - MP = Polish finish (FR, BR), and Matte finish (Bond Flat)
- (10) **Bond Length:** See Standard Chart
Example: BL of .0020 = 2
Note: We do not recommend bond lengths any larger than .005".
- (9) **RIBBON SIZE:** See Standard Chart
Example: .0005 x .005 = .5 x 5
Thickness x Width
- (8) **FOOT TYPE:** F = Flat
CG = Cross Groove
DT = Diamond Tip
(Please specify Ribbon size)

For special sizes or dimensions insert an (X) in the appropriate position of the part number then specify what (X) equals. Example: M-RKS-O-X-1/16-3/4-45-CG-.5x5-2-M-A7 (X) FR=.0012, BR=.0007

RIBBON WIRE

ORDERING INFORMATION
RIBBON BONDING WEDGES
FOR GOLD AND ALUMINUM WIRE

SAMPLE PART NUMBER: M- RN-O-D-1/16-1-45-CG-.5x5-2-M- *

SYMBOL EXPLANATION: 1 2 3 4 5 6 7 8 9 10 11 12

1. **MATERIAL:** _____
M = Ceramic
C = Tungsten Carbide
T = Titanium
All other: See Material Selection Guide

2. **SERIES:** RN _____

3. **WIRE FEED:** O = Standard Feed _____
V = Vertical Feed _____

4. **FRONT/BACK RADIUS:** See Radius Option Chart
*For special Radius sizes insert an X Please specify FR/BR

5. **SHANK DIA.:** Please Specify Diameter _____

6. **TOOL LENGTH:** Please Specify Length _____

7. **HOLE ANGLE:** for RN (30°, 38°, 45°, 52°, 55°, 60°) for RN-V (45°, 55°, 60°)
for RN-V with A8D Opt.(45°, 52°)

(12) See Tool Option

(11) **FOOT FINISH:**
M = Matte finish (FR, BR, & Bond Flat)
P = Polish finish (FR, BR, & Bond Flat)
MP = Polish finish (FR, BR), and Matte finish (Bond Flat)

(10) **Bond Length:** See Standard Chart
Example: BL of .0020 = 2
Note: We do not recommend bond lengths any larger than .005".

(9) **RIBBON SIZE:** See Standard Chart
Example: .0005 x .005 = .5 x 5
Thickness x Width

(8) **FOOT TYPE:** **F** = Flat
CG = Cross Groove
DT = Diamond Tip
(Please specify Ribbon size)

For special sizes or dimensions insert an (X) in the appropriate position of the part number then specify what (X) equals. Example: M-RN-O-X-1/16-3/4-45-CG-.5x5-2-M-A7 (X) FR=.0012, BR=.0007

SERIES RCSH

Double Flat ,Vertical Feed for Palomar (Hughes)
Hesse Mechatronics

FOR MANUAL AND SEMI-AUTOMATIC BONDERS

We recommend a .0005" back radius and a cross groove or a flat bond foot when ordering tools for gold wire thermosonic bonding. For more gold wire application information see **Tech Tip**

RCSH-SERIES RIBBON WIRE

Ribbon Width: .0020" through .0200"
Ribbon Thickness: .00025" through .0020"

* S1 Option

Standard: Ø 1/16, 45°, 55°, 60° Hole Angle : FS"=.015" (.38 mm) .

SERIES RCSH

RIBBON WIRE

ORDERING INFORMATION RIBBON BONDING WEDGES FOR GOLD AND ALUMINUM WIRE

SAMPLE PART NUMBER: M-RCSH-D-1/16-1-45-CG-.5x5-2-M-*

SYMBOL EXPLANATION: 1 2 3 4 5 6 7 8 9 10 11

1. **MATERIAL:** _____
M = Ceramic
C = Tungsten Carbide
T = Titanium
All other: See Material Selection Guide

2. **SERIES:** RCSH _____
3. **FRONT/BACK RADIUS:** See Radius Option Chart
*For special Radius sizes insert an X. Please specify FR/BR

4. **SHANK DIA.:** Please Specify Diameter _____

5. **TOOL LENGTH:** Please Specify Length _____

6. **HOLE ANGLE:** for RCSH (45°, 55°, 60°) _____

(11) S1 and other Option
See Tool Options

(10) FOOT FINISH:

M = Matte finish (FR, BR, & Bond Flat)
P = Polish finish (FR, BR, & Bond Flat)
MP = Polish finish (FR, BR), and
Matte finish (Bond Flat)

(9) **Bond Length:** See Standard Chart
Example: BL of .0020 = 2
Note: We do not recommend
bond lengths any larger than .005".

(8) **RIBBON SIZE:** See Standard Chart
Example: .0005 x .005 = .5 x 5
Thickness x Width

(7) **FOOT TYPE:** F = Flat
CG = Cross Groove
DT = Diamond Tip
(Please specify Ribbon size)

For special sizes or dimensions insert an (X) in the appropriate position of the part number then specify what (X) equals. Example: M-RCSH-X-1/16-1"-45-CG-.5x5-2-M-A7 (X) FR=.0012, BR=.0007

"T" To be determined according to the size of FR and BR and Hole Bore Length

SERIES RNH

Double Flat ,Vertical Feed for Palomar (Hughes)
Hesse Mechatronics

FOR AUTOMATIC BONDERS

45° Hole Angle

55°-60° Hole Angle

FOR RNH-SERIES

We recommend a .0005" back radius and a cross groove or a flat bond foot when ordering tools for gold wire thermosonic bonding. For more gold wire application information see **Tech Tip**

RNH-SERIES RIBBON WIRE

Ribbon Width: .0020" through .0200"
Ribbon Thickness: .00025" through .0020"

* S1 Option

Standard: Ø 1/16, Hole Angle: 45°, 55°, 60°, FS"=.015" (.38 mm)

Cross Groove

Flat

Back View

Diamond Tip=DT preferably for large Tools
Minimum of Groove Radius=.00025
Groove to Groove=.0015

SERIES RNH

RIBBON WIRE

ORDERING INFORMATION
RIBBON BONDING WEDGES
FOR GOLD AND ALUMINUM WIRE

SAMPLE PART NUMBER: M-RNH-D-1/16-1"-45-CG-.5x5-2-M-*

SYMBOL EXPLANATION: 1 2 3 4 5 6 7 8 9 10 11

1. MATERIAL:

M = Ceramic
C = Tungsten Carbide
T = Titanium
All other: See Material Selection Guide

2. SERIES: RNH

3. FRONT/BACK RADIUS: See Radius Option Chart

*For special Radius sizes insert an X Please specify FR/BR

4. SHANK DIA.: Please Specify Diameter

5. TOOL LENGTH: Please Specify Length

6. HOLE ANGLE: for RNH (45°,55°,60°)

(11) S1 and other Option
See Tool Options

(10) FOOT FINISH:

M = Matte finish (FR, BR, & Bond Flat)
P = Polish finish (FR, BR, & Bond Flat)
MP = Polish finish (FR, BR), and
Matte finish (Bond Flat)

(9) Bond Length: See Standard Chart

Example: BL of .0020 = 2

Note: We do not recommend
bond lengths any larger than .005".

(8) RIBBON SIZE: See Standard Chart

Example: .0005 x .005 = .5 x 5

Thickness x Width

(7) FOOT TYPE: F

= Flat

CG = Cross Groove

DT = Diamond Tip

(Please specify Ribbon size)

For special sizes or dimensions insert an (X) in the appropriate position of the part number then specify what (X) equals. Example: M-RNH-X-1/16-1"-45-CG-.5x5-2-M-A7 (X) FR=.0012, BR=.0007

SERIES CSH

FOR MANUAL AND SEMI-AUTOMATIC BONDERS

Double Flat ,Vertical Feed for Palomar (Hughes)
Hesse Mechatronics

We recommend a .0005" back radius and a cross groove or a flat bond foot when ordering tools for gold wire thermosonic bonding. For more gold wire application information see **Tech Tips**

CSH-SERIES

WIRE Ø .0005" through .0020

S1 Option

*To be determined according to ribbon size

Standard: Ø 1/16, Hole Angle: 45°, 55°, 60°, FS"=.015" (.38 mm)

SERIES CSH

SMALL WIRE

ORDERING INFORMATION
SMALL WIRE BONDING WEDGES
FOR GOLD AND ALUMINUM WIRE

SAMPLE PART NUMBER: **M-CSH-D-1/16-3/4-45-CG-2020-M-***

SYMBOL EXPLANATION: 1 2 3 4 5 6 7 8 9 10

1. MATERIAL: _____

M = Ceramic
C = Tungsten Carbide
T = Titanium

All other: See Material Selection Guide

2. SERIES: CSH _____

3. FRONT/BACK RADIUS: See Radius Option Chart
*For special Radius sizes insert an X Please specify FR/BR

4. SHANK DIA.: Please Specify Diameter _____

5. TOOL LENGTH: Please Specify Length _____

6. HOLE ANGLE: 45°, 55°, 60 _____

(10) S1 and other Option
See Tool Options

(9) FOOT FINISH:

M = Matte finish (FR, BR, & Bond Flat)
P = Polish finish (FR, BR, & Bond Flat)
MP = Polish finish (FR, BR), and
Matte finish (Bond Flat)

(8) TOOL SIZE: See Standard Chart

(7) FOOT TYPE: F = Flat
C = Concave
CSF = Concave with Side Flats
(CSF not available with ceramic tools)
CG = Cross Groove
GW = Groove in wire direction
(Please specify wire size)

For special sizes or dimensions insert an (X) in the appropriate position of the part number then specify what (X) equals.

Example: M-CSH-X-1/16-3/4-45-F-2020-M (X) FR=.0012, BR=.0007

6. **HOLE ANGLE:** 45°, 55°, 60 _____

(10) S1 and other Option
See Tool Options

(9) **FOOT FINISH:**
M = Matte finish (FR, BR, & Bond Flat)
P = Polish finish (FR, BR, & Bond Flat)
MP = Polish finish (FR, BR), and Matte finish (Bond Flat)

(8) **TOOL SIZE:** See Standard Chart

(7) **FOOT TYPE:** **F** = Flat
C = Concave
CSF = Concave with Side Flats (CSF not available with ceramic tools)
CG = Cross Groove
GW = Groove in wire direction (Please specify wire size)

For special sizes or dimensions insert an (X) in the appropriate position of the part number then specify what (X) equals.

Example: M-KNLH-X-1/16-3/4-45-F-2020-M (X) FR=.0012, BR=.0007

ORDERING INFORMATION
LARGE WIRE BONDING WEDGES
FOR GOLD AND ALUMINUM WIRE

SAMPLE PART NUMBER: **C-SIVG-20-1/8-2.50-70-MP-1-***

SYMBOL EXPLANATION:

1. **MATERIAL:**
 - M = Ceramic
 - C = Tungsten Carbide
 - T = Titanium
 - All other: See Material Selection Guide
2. **SERIES:** sivg
3. **WIRE SIZE:** See Standard Chart
4. **TOOL DIAMETER:** = .1249" / 3.17 mm
5. **TOOL LENGTH:** = 2.50" / 63.5 mm
6. **GROOVE ANGLE:** = 70°
7. **FOOT FINISH:**
 - M = Matte finish (FR, BR, & Bond Flat)
 - P = Polish finish (FR, BR, & Bond Flat)
 - MP = Standard: Polish finish (FR, BR) and Matte finish (Bond Flat)
8. **REVISION # IF APPLICABLE**
EXAMPLE: LOOKUP SIVG-8 "(1)"
9. **See Tool Options**
EXAMPLE: A1 or VGC

*Other sizes available upon request ***All dimensions and tolerances are for reference only**

SERIES F-101

Standard Tab Tool

This style of tool has no feed hole and is used on very small pads. Usually manual Bonders are used. The wire is first positioned over the bonding pad area then the wedge is lowered onto the wire to make the bond. This operation can be thermo compression, thermosonic, or ultrasonic type bonding. We have tried to cover most bonding styles in this series for your requirements. If we have not shown a style for your needs please contact the Engineering Department for your custom design.

MTA = MAIN TAPER ANGLE
SA = SIDE VIEW ANGLE

Special dimensions available upon request.
Dimensions not shown please specify.

We recommend ceramic material for all
gold wire bonding for optimum results.

VACUUM PICK-UP TOOLS (Page 1 of 3)

First, choose Tool Tip input: CC, FT, IP, SC or P, Second choose Tip Style (Head Form) input: 1,2 or 3 (Page 115)

CC= Concave Channel

L = Tool Length
DL = Die Length
DW = Die Width
DT = Die Thickness

Example Part # C-CC-2-1/16-1-012-010-004
Insert a CC in Series Part# Place 2.

FT= Flat Tip Rectangular

L = Tool Tip Length
W = Tool Tip Width

Example Part # C-FT-2-1/16-1-041-036
Insert a FT in Part# Place 2.

IP= Inverted Pyramid

L = Tool Length
TAI = Tip Angle Inside
DL = Die Length
DW = Die Width
DT = Die Thickness

Example Part # C-IP-2-1/16-1-90-041-036-004
Insert a IP in Part# Place 2.

SC= Straight Sided Channel

L = Tool Length
TAI = Tip Angle Inside
DL = Die Length
DW = Die Width
DT = Die Thickness

Example Part # C-SC-2-1/16-1-90-625-90-020-016-004
Insert a SC in Place 2. Series

For Order Information lookup Page 3 of the Series Vacuum Pickup Tools
DL = Die Length, DW = Die Width, DT = Die Thickness, CR = Corner Relief, TAI = Tip Angle Inside
*All dimensions and tolerances are for reference only

SERIES CC, FT, IP, SC, P

VACUUM PICK-UP TOOLS (Page 2 of 3)

FT = Flat on Tip
PL = Pocket Length
PW = Pocket Width
PD = Pocket Depth
PR = Pocket Radius

P= Pocket

Example Part # C-P-2-1/16-1-041-036-004

Insert a **P** in Part# Place 2.

Tip Style (Head Form) Configuration

Choose a Tip Style, input : 1, 2 or 3 in the Part Number in 3. Style

Illustrated Tool
SC-SERIES

Tip Style 1 small Tool

Illustrated Tool

WEDGE APPLICATION QUESTIONNAIRE

The following questionnaire will assist DEWEYL Tool Co. in recommending the appropriate wedge for your specific application. We understand that the demands on your daily schedule may not allow time to interpret our catalog part numbering system. Thus we encourage you to take advantage of this form which will allow our applications staff to recommend the finest bonding wedge in the industry.

1. What wire size will you be bonding?

2. What wire material will you be bonding?

3. What is the smallest bonding pad size in your specific application?

4. Who manufactures your wire bonder?

5. What model number wire bonder are you utilizing with this application?

Please don't forget to include
your name, address, phone,
fax, and E-mail address.
Thank you for considering
DEWEYL Tool Co.

6. What length bonding wedge does your equipment manufacturer recommend?

7. To what angle wire feed is your wire bonder configured?

8. What type of product do you wire bond?

9. What special circumstances would you like considered when we select your wedge part number?

10. If your application is gold wire, then will you utilize the "thermoccompression" or the "thermosonic" bonding technology? (Circle one)

11. Is this for manual, semi-automatic, or automatic bonding? (Circle one)

Tool Cleaning Process

For Aluminum Wire Bonding Tools.

Materials Required:

1. Tool Tray
2. Sodium Hydroxide
3. (3) 400 ml glass beakers.
4. Ultrasonic Cleaner
5. Distilled water
6. Isopropyl alcohol
7. Dry compressed air

Step (1) Load all tools in tool tray with point of tool up. Do not place tools in tray tip down or tool damage will occur. Mix cleaning solution using water and sodium hydroxide. Mix (5) five parts water to (1) one part sodium hydroxide.

Step (2) Place tool tray in 400ml beaker with enough Sodium Hydroxide cleaning solution to cover all tools completely. Place the beaker into the ultrasonic cleaner for approximately (3) three to (5) five minutes.

Step (3) Transfer tool tray from cleaning solution beaker to 400ml beaker of hot water. Place beaker in ultrasonic cleaner for (3) three to (5) five minutes. Repeat this procedure with fresh hot water.

Step (4) Complete the cleaning sequence with an alcohol rinse. Submerge the tool tray (2) two or (3) times in alcohol solution and then blow-dry with clean dry air. Warning-Do not use compressed air contaminated with moisture or oil.

Note: It's important to insure the tools are properly secured during the ultrasonic cleaning process. Damage will occur if the tools are not held properly during the ultrasonic cleaning.

For your convenience

We offer this information in support of our customers and to encourage them to maximize the life of our product. However, for your convenience we offer this cleaning service. You may contact our sales order desk to arrange for tool cleaning. Call 707-765-5779.
